## SUMMARY

---

Full stack developer with 2+ years of experience. I design in Figma and then build what I designed, which means the thing that ships usually looks like the thing that was drawn. Most of my work is React and Next.js on the web, React Native on mobile, and Node.js or FastAPI behind both. Recent projects include a sealed bid auction system used by Enderas National PLC and an education platform that runs on web, mobile, and desktop off one backend.

## TECHNICAL SKILLS

---

**Languages** TypeScript, JavaScript, Python, SQL, HTML, CSS

**Frontend** React, Next.js, TypeScript, Flutter, React Native, Tailwind CSS, Vite, Electron

**Backend** Node.js, Express, FastAPI, MongoDB, Supabase, PostgreSQL, REST APIs, OAuth, role based access control

**AI** Claude API, OpenAI, building LLM features into real products rather than demos

**Tooling** Git, GitHub, Vercel, Railway, Turborepo, npm workspaces, Figma, Adobe XD, VS Code

**Design** UI/UX design, wireframing, interactive prototyping, design systems, accessibility

## EXPERIENCE

---

**Full Stack Developer and UI/UX Designer**

Dec 2024 – Present

*Delta Rabbits · Addis Ababa, Ethiopia · Full-time*

- Build and maintain the education platform detailed under Projects, working across the TypeScript web app, the Flutter mobile app, the Electron desktop build, and the MongoDB backed API all three sit on.
- Own the design side as well as the code. I do the wireframes and prototypes in Figma, then build them out in TypeScript, so there is no handover gap where details get lost.
- Take feedback straight from the people using the product, which usually arrives as a complaint rather than a ticket, and turn it into something specific enough to build.
- Fix what comes back from real devices. Most of it is layout and state behaviour across screen sizes, and most of it is not reproducible until you actually hold the phone.
- Write the documentation, both the technical kind and the plain language kind that clients read.

## Full Stack Web and Mobile App Developer

Aug 2026 – Sep 2026

*Mager Software PLC · Addis Ababa, Ethiopia · Full-time*

- Built the Enderas sealed bid auction platform used by Ethiopian government institutions, handling the entire product from API to iOS and Android.
- Split the frontend into public bidder and admin console apps, both reading from the same backend, with role based access control keeping institution staff, bidders, and administrators in their own views.
- Handled KYC on bidders, the auction lifecycle, bid submission and invalidation, winner selection, and payment flows with CPOs after a win.

## Video Editor

Jul 2024 – Dec 2024

*EBJ Media · Remote · Contract*

- Cut promotional and social video from raw footage in Premiere Pro and After Effects, usually on a same week turnaround.
- Handled the full pipeline on most pieces, from assembling the rough cut through colour, sound, and final export.

## ICT Intern

Jul 2024 – Sep 2024

*Hawassa University ICT Center · Hawassa, Ethiopia*

- Configured and documented a new network topology, and spent most of the internship troubleshooting connectivity problems across the centre.

## PROJECTS

---

**Enderas, Digital Auction and Bidding Platform** React · TypeScript · Node.js · Supabase · npm workspaces

- Sealed bid auction system built for Enderass National PLC and used by Ethiopian government institutions. Covers KYC on bidders, the auction lifecycle, bid submission and invalidation, winner selection, and CPO payment handling after a win.
- Split the frontend into two apps, one public and one admin, sharing components through an npm workspace package. That killed a lot of duplicated UI and stopped the two sides drifting apart as features landed.
- Role based access control separates institution staff, bidders, and administrators, since the three groups see very different versions of the same auction.

**Relavo, AI Client Relationship Platform** React · Vite · Express · FastAPI · Claude API · Supabase

- Keeps client records and interaction history in one place for small businesses, and uses the Claude API to summarise a relationship and surface the accounts that have gone quiet..

- Built solo, from the database schema up through the interface.

### **Delta Labs, Education Platform**   TypeScript · MongoDB · Electron · Flutter

- One product across three clients: a TypeScript web app, a Flutter mobile app, and an Electron desktop build, all reading from the same MongoDB backed API.
- Covers course enrollment, school management, competitions, and certification, with AI assisted features built into the learning flow.
- Designed the whole thing in Figma first and carried one design system through all three clients, so the desktop build does not feel like a different product to the phone.

### **NoStock, ERP and Business Management System**   React · Node.js · PostgreSQL

- Pulls inventory, operations, and internal workflows into one web system, built so new modules can be added without pulling the core apart..

## **EDUCATION**

---

### **BSc, Computer Science**

Oct 2020 – Jul 2024

*Dilla University* · CGPA 3.44 / 4.0

- Final projects: Health Advisor, an Android app giving personalised health recommendations; an online voting system; and a desktop student information system.

## **ALSO**

---

- [Google UX Design Certificate on Coursera.](#)
- [Introduction to AI Certificate.](#)
- Languages: English and Amharic, both fluent.
